

WHO WE ARE

WGI Manufacturing Inc. (WGI) and its subsidiary Diamond-Kote® "DK" have been serving the automotive appearance and protection product needs of the new vehicle retail dealer for over 40 years. Founded in 1968, DK has grown from its beginnings in Western Canada to serve dealers throughout Canada, the USA and most recently China.

WGI is an industry leader in the development of innovative environmentally responsible products. All of our products are CFC free and exceed Global requirements for the elimination of ozone depleting substances. Our Research and Development team continually develop new products that are safe and effective to ensure our products retain their premier status in the industry.

For as long as automobile manufacturers have been shipping vehicles to dealers there has been transit damage to the painted surfaces upon arrival. As a result of intensive research and development, WGI created WRAPS™. This water based product has been specially formulated to protect the new car finish between the period of manufacturing and final delivery to the automobile dealer.

There is a better way...

*New In-Transit Product
from WGI Manufacturing*

Pollution, environmental compliance and increasing labor costs. What are you doing about your vehicle protection issues?

The future of automobile transportation protection is W.R.A.P.S.™ (Weather Resistant Automotive Protective Spray)

W.R.A.P.S.™ is a truly unique water based liquid transparent vehicle surface protection system that can be either manually or robotically applied.

When robotically applied, up to approximately 80% of the vehicle's metal and plastic surfaces can be protected.

The film cures to between 8 and 10 mils thick, has been tested in extreme weather conditions, holds up in transit, can remain on the vehicle for one year or longer, and is easily removed without chemical assistance at the dealership.

WRAPS –

The future of Automobile Transportation Protection.
